Retrofit “Dry-pit” Submersible Assembly
benefits Municipal Market

Pumpcoat has always served the Municipal Water and Wastewater market with pump repairs, pump parts and coatings for the occasional floor or tank. Pumpcoat is pleased to add the “Abba Retrofit” unit to it’s product line.

This drop in replacement unit changes any dry pit pump to a submersible pump. Utilizing the existing pump casing, the pump’s internals are pulled out and replaced with the retrofit unit. In one low cost installation the customer now has a new pump without the need for any piping changes or base or foundation modifications. There are no more worries about pumps seizing up after the pits flood. This new item is available for many pump types including: Allis Chalmers, Aurora, Crane Deming, Morris, Smith & Loveless, Worthington, Fairbanks Morse, Flygt, Yeomans, ABS, Flowserve, KSB and Wilo. For more information or a quote to change your pump, please call Pumpcoat at 508-540-5878 or email us sales@pumpcoat.com.
